

## 1. Description

**UIB3351 series intelligent pressure transmitters** are suitable for the measurement of flow, level and pressure (differential pressure, gauge pressure and absolute pressure), this product has strong adaptability and high reliability, and also has good anti-interference ability and zero stability. Its accuracy reaches 0.1%FS. 3351 can be made with HART Protocol communication, can be communicated with many hand-held communicator like HK-375 & Rosemount 275 etc.

UIB3351 intelligent pressure transmitter is composed of pressure sensor and PCB. The pressure sensor includes sensing element, EEPROM and other parts; PCB includes micro processor, digital/analogue converter, digital communication and memory EEPROM etc, to complete the conversion from pressure signal to 4~20mA DC signal.

**UIB3351 series intelligent pressure transmitter includes 8 types:**

- UIB3351DP differential pressure transmitter
- UIB3351HDP high system differential pressure transmitter
- UIB3351GP gauge pressure transmitter
- UIB3351AP absolute pressure transmitter
- UIB3351DP flow transmitter
- UIB3351LT level transmitter
- UIB3351GP remote pressure transmitter
- UIB3351DP remote differential pressure transmitter

## 2. Features

- adopting microprocessor to improve its flexibility and functions
- have strong self-diagnostic capability
- wide ranges from 0~100Pa to 42MPa
- accuracy better than 0.1%FS or 0.2%FS, rangeability 15:1
- Zero and span adjustment without mutual influence
- have perfect remote setting, local setting as well as adjustment function
- 2-wire system, Hart Protocol
- use digital compensation technology to compensate for temperature and system pressure error
- good stability, high accuracy, adjustable damping, strong unidirectional overload capacity
- no mechanical transmission parts, little repair work, strong vibration resistance
- all general parts, convenient maintenance
- optional of diaphragm material (contact medium), explosion-proof
- super performance and reliability

# UIB3351 Metal Capacitive Pressure/Differential Pressure Transmitters

---

## 3. Specifications

**Application:** measurement of gas, liquid or steam.

**Pressure range:** 0~0.1kPa...40MPa

**Accuracy:** 0.1%FS,0.2%FS

**Output:** 2-wire 4~20mA, and superimposes digital process variable signal which conforms to HART Protocol

**Rangeability:** 15:1

**Power supply:** 12~45V DC, standard 24VDC

**Load resistance:** the max. allowed load resistance on circuit is determined by power supply;  
for HART,  $250\Omega \leq \text{load resistance} \leq 1100\Omega$

**Indicator:** 0~100 linear meter or digital indicator

**Stability:** not exceed the basic error absolute value of the max. range within 12 months

**Temperature effect:**  $< 0.03\%FS/10^\circ C$  for GP DP transmitter

**System pressure effect:**  $\pm 0.25\%FS/10MPa$  for DP type (can be revised in pipeline pressure);  
 $\pm 0.2\%FS/32MPa$  for HP type, (can be revised in pipeline pressure)

**Power supply effect:** NA

**EMI / RFI interference effect:** 20~1000MHz, output drift less than 0.01%FS if field intensity reach 30V/m

**Influence of vibration:** in arbitrary axis,  $0.05\%FS/g @ 100HZ$

**Mounting position effect:** max. 0.24kPa. When liquid membrane is mounted horizontally, zero drift at most 1.25kPa. Zero drift can be modified and without any influence for range.

**Influence of load:** in the power supply range, no load effect

**Temperature range:** 1. ambient temperature:  $-40 \sim +85^\circ C$ ,  $-20^\circ C \sim +65$  (for indicator)  
2. medium temperature range:  $-40 \sim +120^\circ C$   
3. storage temperature range:  $-40 \sim +105^\circ C$

**Relative humidity:** 0~100%RH

**Weight:** 3.5kg ( standard configuration without mounting kits, height: 190mm )  
electrical connection: M20x1.5 or NPT1/2

**Process Connection:** 1. 1/4NPT Female  
2. connector

**Diaphragm material:** 316L, hastelloy-C276, or monel

**Vent/drain value:** 316L, hastello-C276, or monel

**O-ring materials:** nitrile rubber, fluorine rubber, Teflon, metal sealing ring

**Electronic shell and coating:** low copper alloy, anodic oxidation, spraying polyurethane

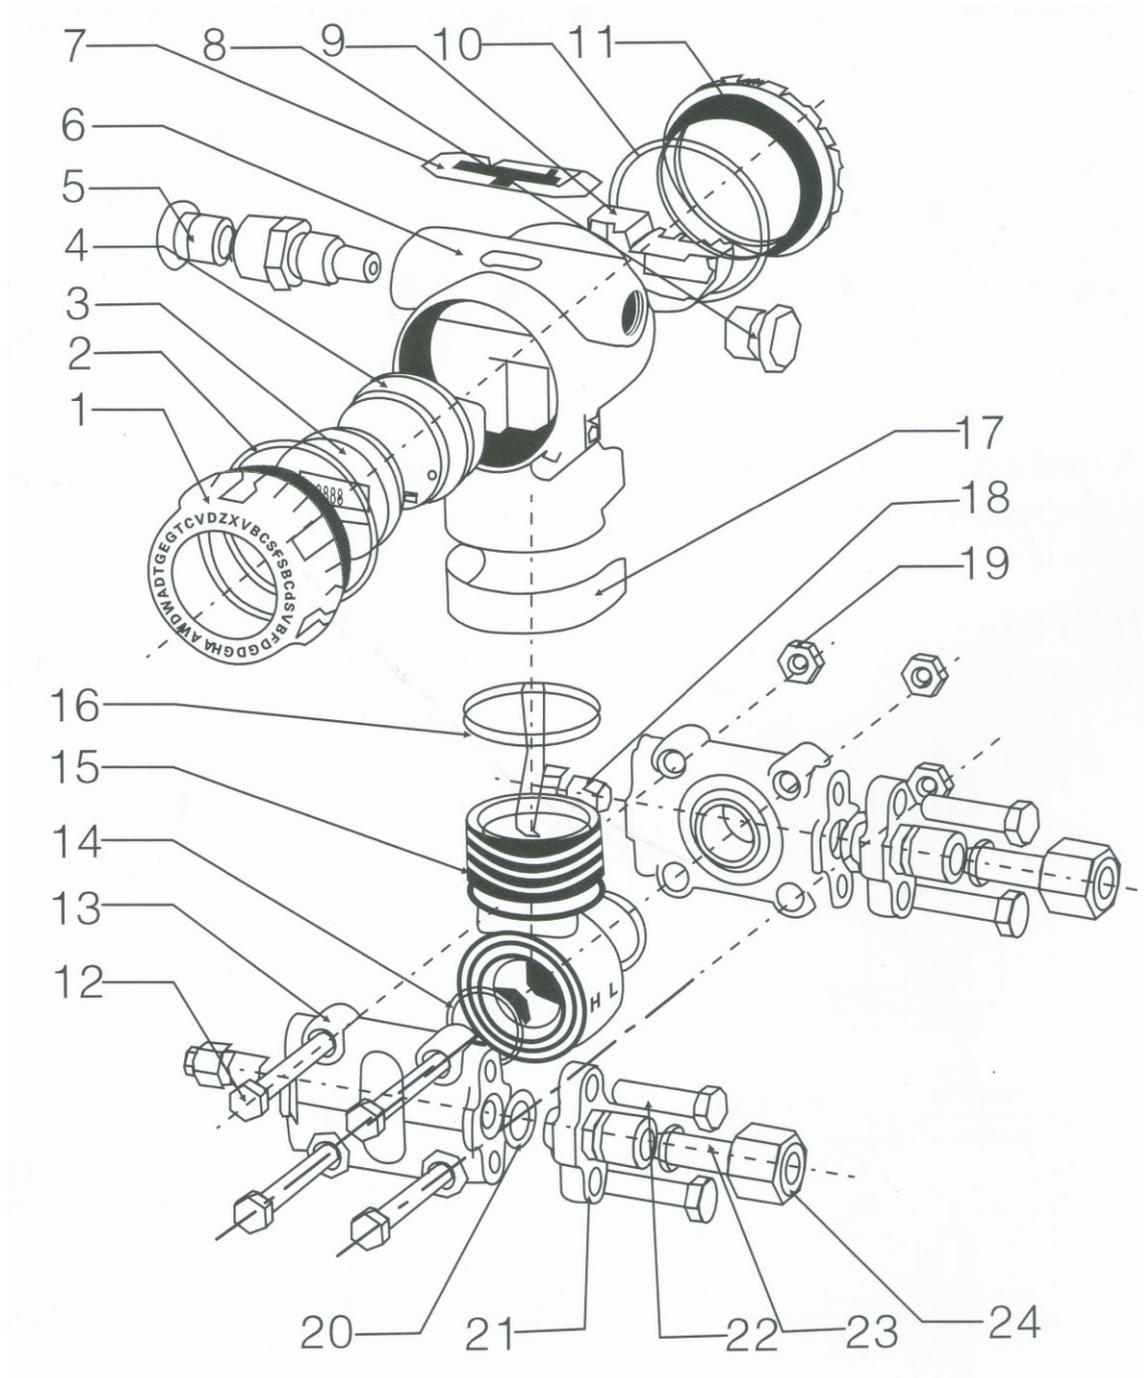

**Sensor filling liquid:** silicone, fluorosilicone oil

**Meter cover and display box:** 10mm toughened glass, nitrile rubber seal

**Protection:** IP67

**Explosion-proof:** intrinsic safety: Exia II Ct6;  
flame proof: Exd II CT6

# UIB3351 Metal Capacitive Pressure/Differential Pressure Transmitters

## Drain/Vent Valve Location

Ordering code D1: drain/vent valve is located on side top of flange. For liquid process application, if the transmitter is installed vertically, the top valve is used to exhaust the gas in the liquid..

Order code D2: drain/vent valve is located on side bottom of flange. For gas process application, if the transmitter is installed vertically, the top valve is used to exhaust the liquid in gas.

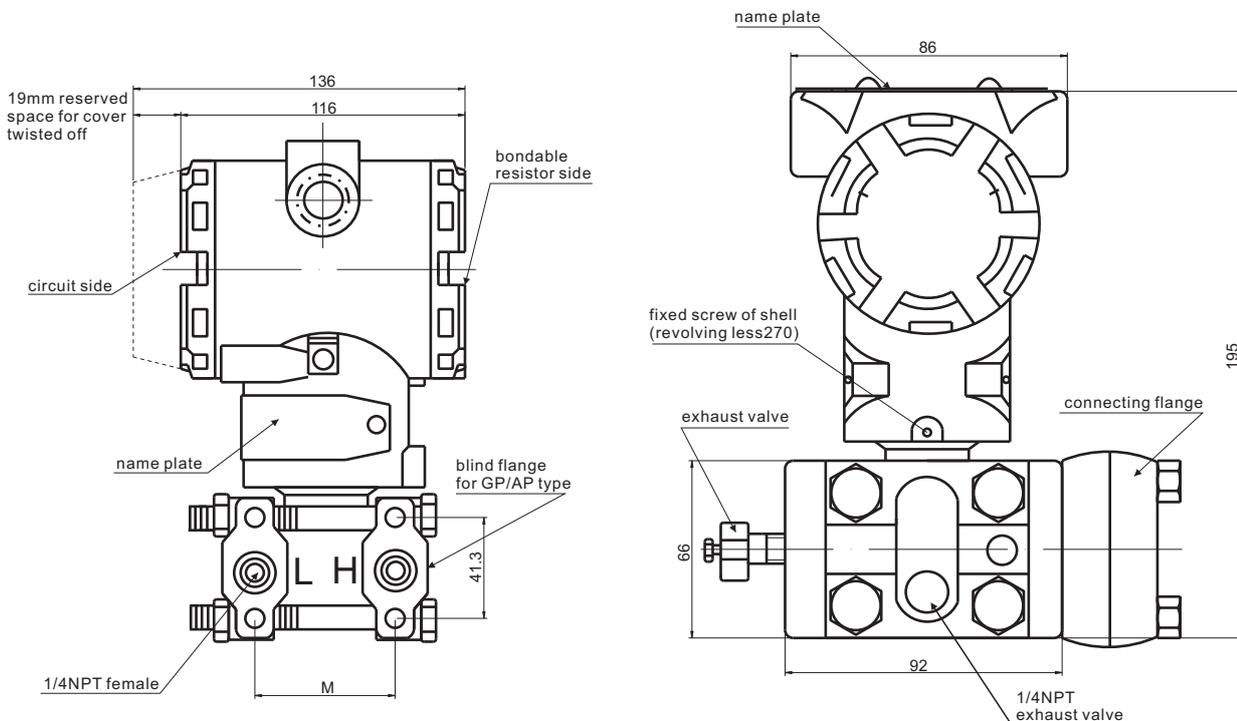

D1: drain/vent valve on top of flange

D2: drain/vent valve on bottom of flange

D0: drain/vent valve on back of flange

**Note:** if there is no remark when ordering, we will supply D0.

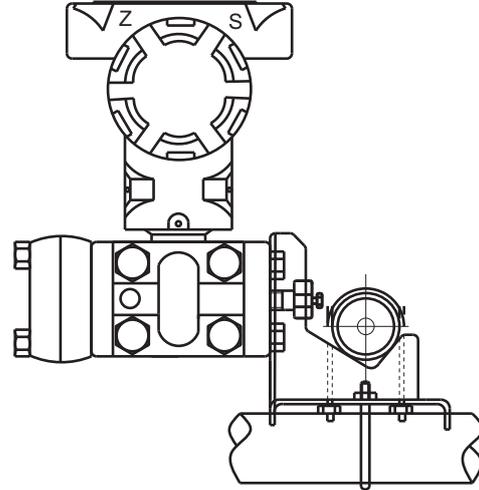

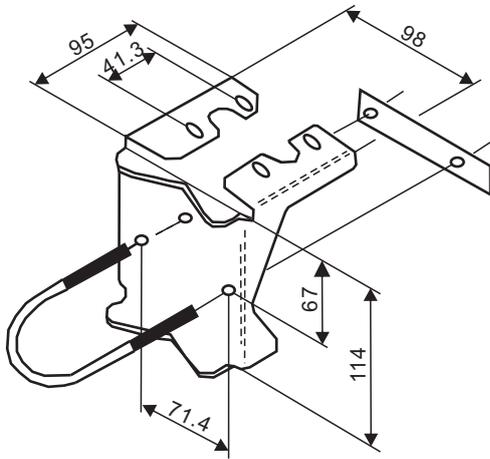

## 5. Dimensions

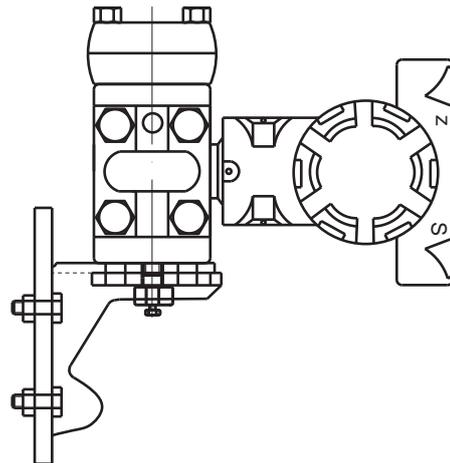

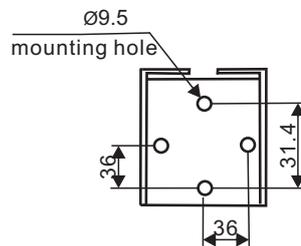

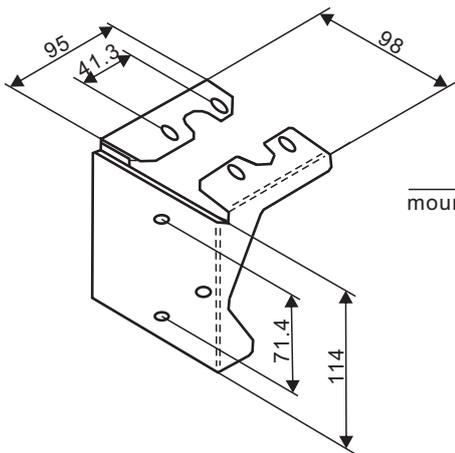

range code	2,3,4,5	6	7	8	9
M(mm)	54	55.4	55.8	57.4	58.5

## 6. Mounting methods

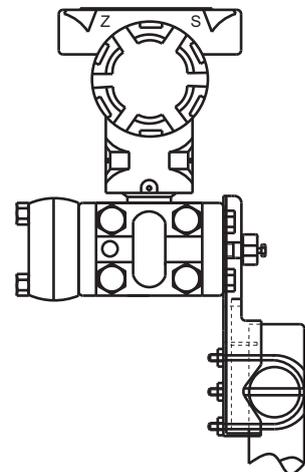

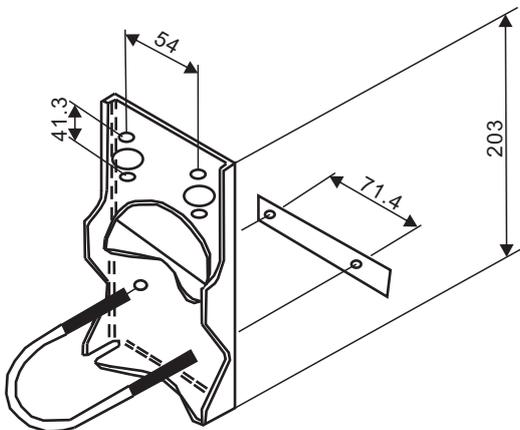

Mounting bracket dimensions and methods, with the help of different structure mounting bracket, the transmitter is independently installed in the measuring object, suitable for DP, GP and AP type.

**a. pipe mounting kit B1**

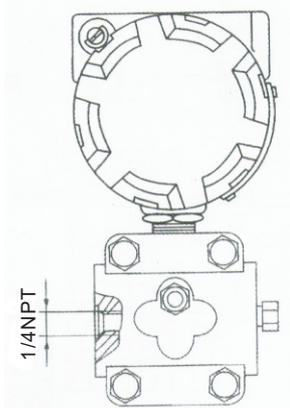

**b. panel mounting kit B2**

**c. pipe flat mount kit B3**

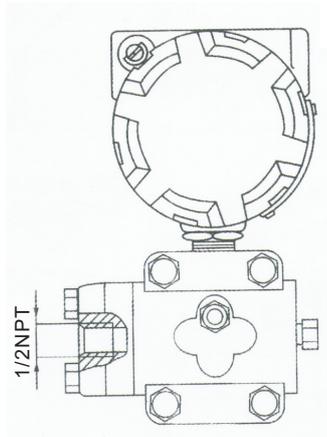

## 7. Process connection

Pressure Chamber Screw Hole Connection

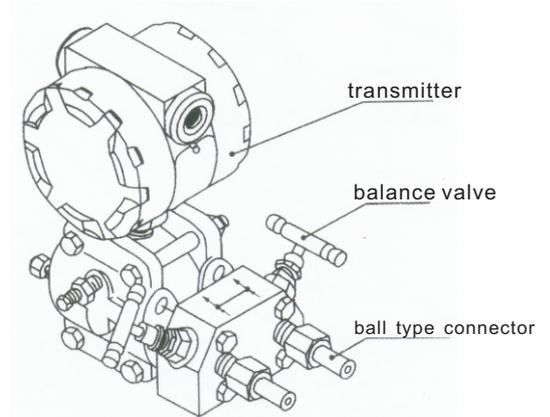

**a. GP**

Adaptor Screw Hole Connection

**b. GP/DP**

install balance valve connection

**c. DP**

**Note:** 1. in pressure measurement, from pressure point to the leaded out pressure signal, the pressure pass through shut off valve and connector, then connect with the transmitter.

2. in low system pressure, differential pressure measurement, can be connected as pressure measurement method; in high system pressure measurement, differential pressure signal should go through balance valve (generally three valve manifold) firstly, and then connect with transmitter. The aim of balance valve is: there is no one-way overload pressure during the transmitter's working process, (in order to get stable differential pressure signal), and it will be convenient to cut the differential pressure signal and remove the transmitter in maintenance.

### Pressure Connection Method

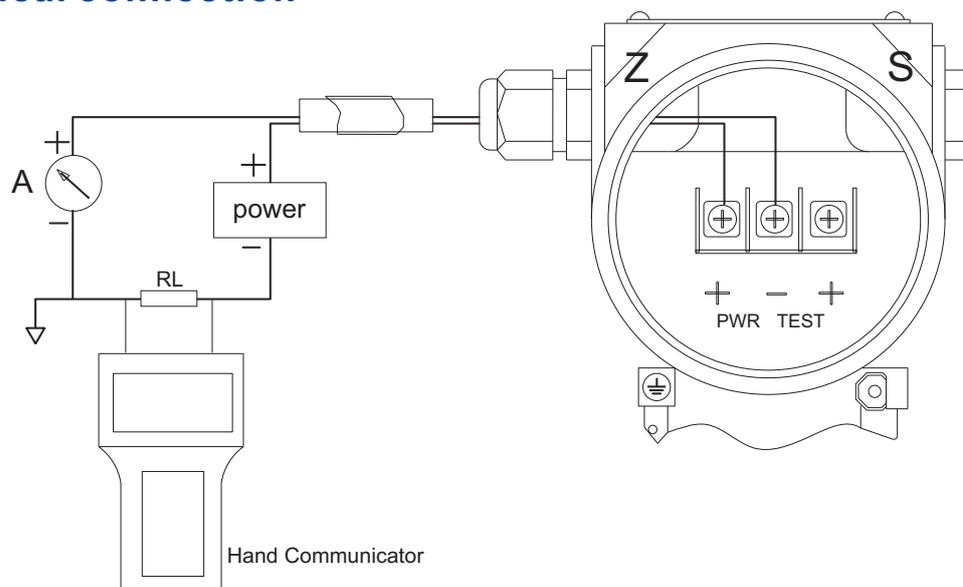

C0: 1/2NPT female connector

C1: 1/2NPT connector with welded pressure pipe

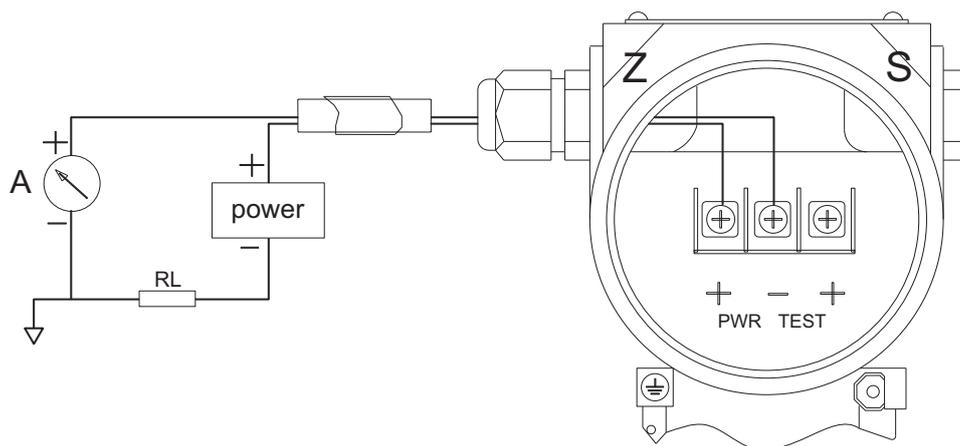

C2: M20x1.5 "T" type connector

Note: if there is no remark when ordering, the transmitter will be supplied with 1/2NPT connector (C0)

## 8. Electrical connection

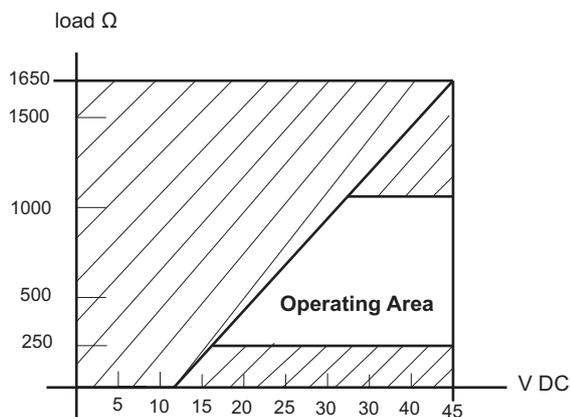

smart 4~20mA output with HART protocol

analogue 4~20mA output

## Loading characteristics

38		UIB3351DP 7	0~0.167...2.5MPa			

## Description

UIB3351DP Differential pressure transmitter is made by using differential metal capacitive sensor as Sensitive element, it is widely used for measurement of gas liquid or vapor pressure, differential pressure, liquid level and density.

# UIB3351HDP High System Differential Pressure Transmitters

## Description

3351HDP high system pressure differential pressure transmitter can work for different pressure measurement under 32MPa line pressure, with 32MPa high work pressure and overload pressure protection, the transmitter is assured its reliable application in high line pressure system.

3351 HDP is used in petrochemical system and power station for differential pressure measurement, and can withstand one-way overload pressure without damage to itself.

## Description

UIB3351DP flow transmitter is specialized to accept differential pressure signal from the throttling element, and the signal will be converted to 4~20mA standard output, which is proportional to the flow, through the electronic circuit board with the square root function.

UIB3351DP is used for homogeneous fluid medium in pipeline, or the air flow volume / mass flow measurement.

## Description

UIB3351GP is capacitive pressure transmitter, it has smart type and analogue type, can measure low pressure till 0.4kPa, and can transfer to a negative pressure transmitter.

It is mainly used for gauge or negative pressure measurement of uniform fluid in pipeline, or for level measurement in open container liquid.

## Description

3351AP is absolute pressure transmitter, its chamber's one side receives the measured absolute pressure signal, the other side is closed into a high vacuum reference room .

It is used for absolute measurement in gas removal system, distillation, evaporation tower and a crystallizer, it allows overload pressure within 10MPa.

## Description

ULB3351 flange type level transmitter is one kind of scene transmitter for mounting in pipelines or vessels. Because its isolating diaphragm contacts liquid medium directly, not need pressure pipe to draw out the pressure from positive pressure side (H side), therefore ULB-3351 is suitable for level, pressure, density measurement of high temperature, macro viscosity, easy crystallized, easy precipitated media.

ULB3351 flange type level transmitter included plane type and insert type. The mounting flange has 3" and 4" according to ANSI standard. If the user has any special requirement please indicate on ordering sheet. The wetted part material of ULB3351 has SS 316L, Hastelloy-C 276, tantalum and Monel etc for options.

The ULB3351 flange type level transmitter is especially suitable for level, pressure and density measurement of special media (high temperature, macro viscosity, easy crystallized, easy precipitated, strong corrosion) in open or sealed containers.

## Features

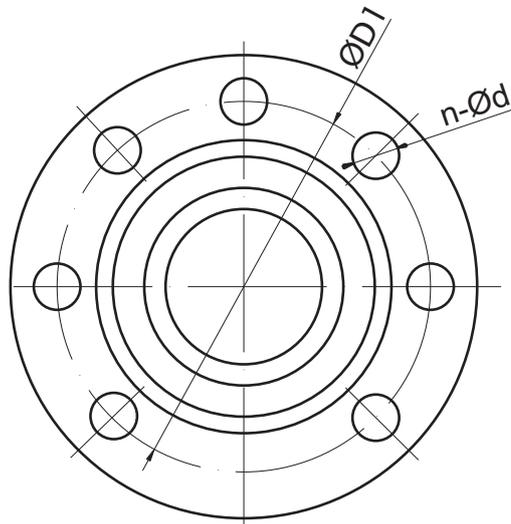

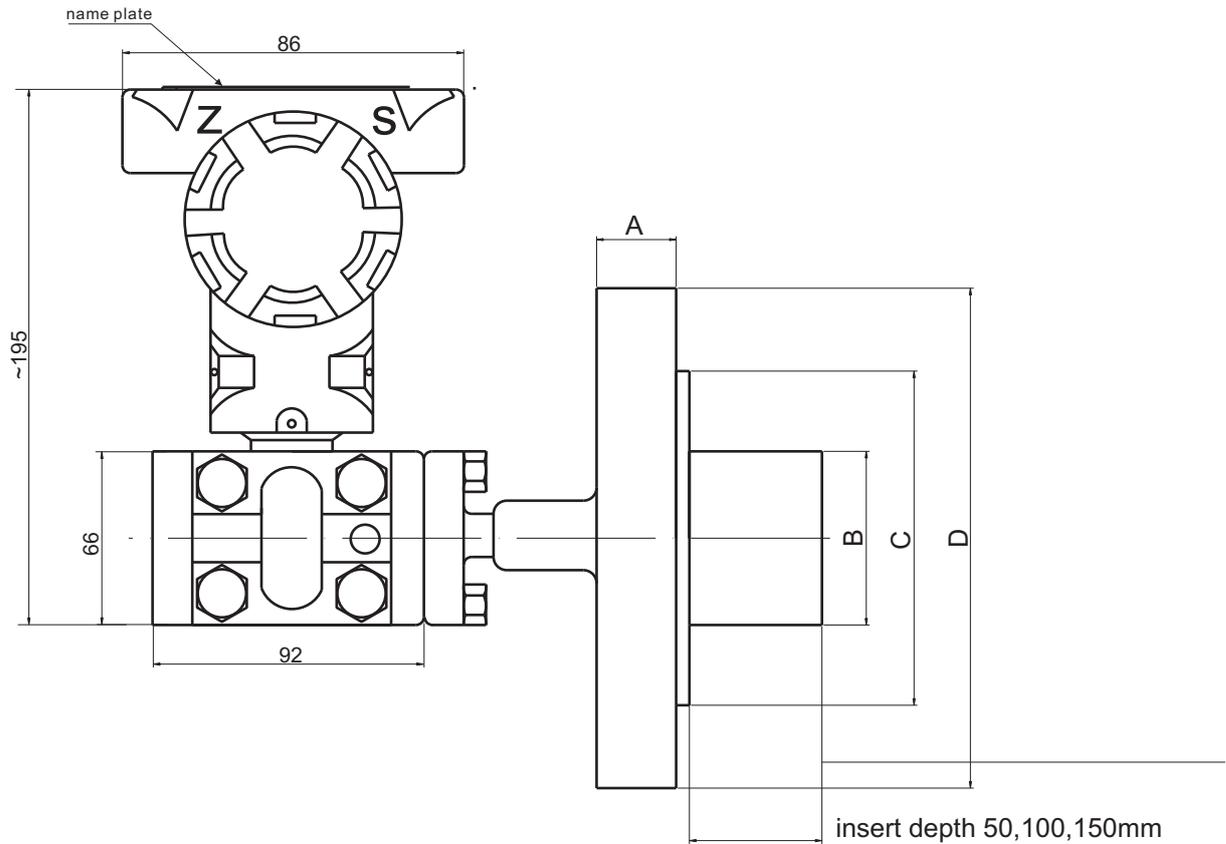

- Measuring range: 0~2.67kPa...2500kPa
- For level, pressure, density measurement of high Temperature, macroviscosity, easy crystallized, easy precipitated or strong corrosive media
- Adjustable range: 6:1 for analog type, 15:1 for intelligent type
- High accuracy, good reliability and stability
- Intrinsic safety and flame proof option.

## Specifications

pressure medium	liquid compatible with stainless steel
measuring ranges	0~2.67kPa...2500kPa
output signal	4~20mA (HART optional)
accuracy	0.1%FS,0.2%FS(standard), 0.5%FS
load resistance	$R_L = (U - 12V) / 0.02A$ (4~20mA current output) U—loop voltage (V)
long-term stability	<0.1%FS/year
supply voltage	12~45VDC
storage temperature range	-40~+105°C
operating temperature range	-40~+85°C
measured media temperature range	-40~+200°C
temperature coefficient of zero	0.1%FS/10°C
temperature coefficient of span	0.05%FS/10°C
insulation resistance	100MΩ@50VDC
process connection	3" mounting flange or others
protection	IP67
explosive-proof	Exia II CT6 or Exd II CT6
material of pressure membrane	316L stainless steel
oil-filled	silicone oil or fluorocarbon oil
housing material	low copper aluminum alloy

## Description

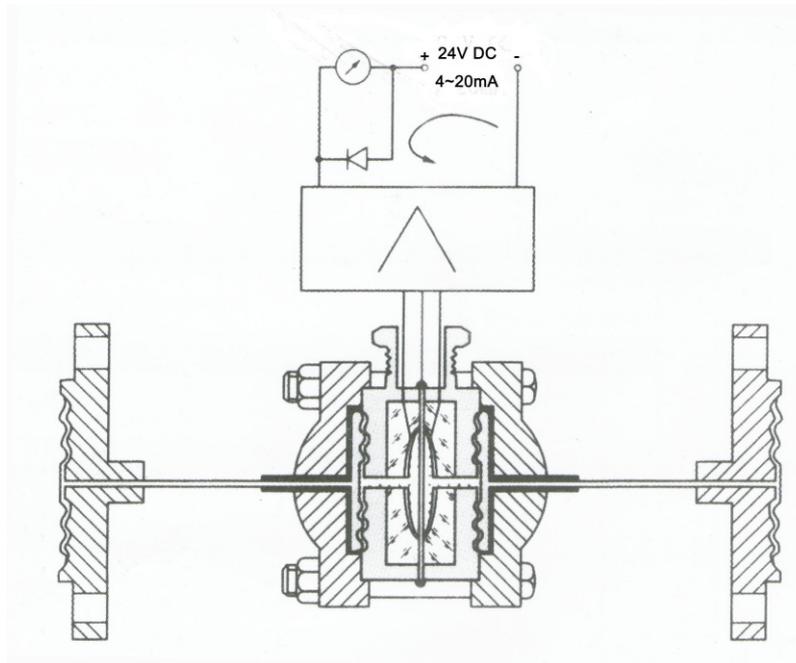

3351GP / DP remote pressure/differential pressure transmitter feels the measured pressure through the remote device which is installed in the pipeline or container. The pressure through the filling silicone oil ( or other liquid ) in capillary is transmitted to the isolated diaphragm of the transmitter's, realizes the process pressure measurement (see the following structure diagram ).

transmitter with single remote device

transmitter with dual remote device

structure diagram

## Features

- can eliminate the possibility of medium leakage from the pressure guiding pipe and cause the pollution for surrounding environment.
- improve the process measurement reliability and stability
- remote assembly is welding structure with strong reliability and low volume liquid filled cavity design, reduce the effect of temperature.
- working pressure is no less than 3.5kPa (absolute pressure)

# UIB3351 Remote Pressure /Differential Pressure Transmitter

## Application

Remote transmitter is mainly used for measurement of following media

- High temperature or high viscosity medium
- Easy to crystallize or solidify medium
- With solid or suspension precipitation medium
- Strong corrosive or toxic medium
- Replacement of the measured medium requires washing but without any not mixing
- Sanitary cleaning requirements are relatively high.

Note: remote flange ordering please refer to “1199 remote device ordering and types”

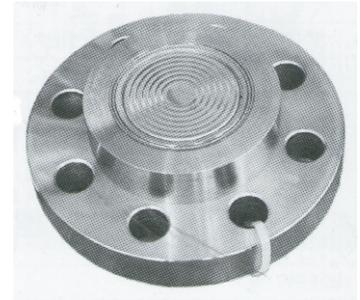

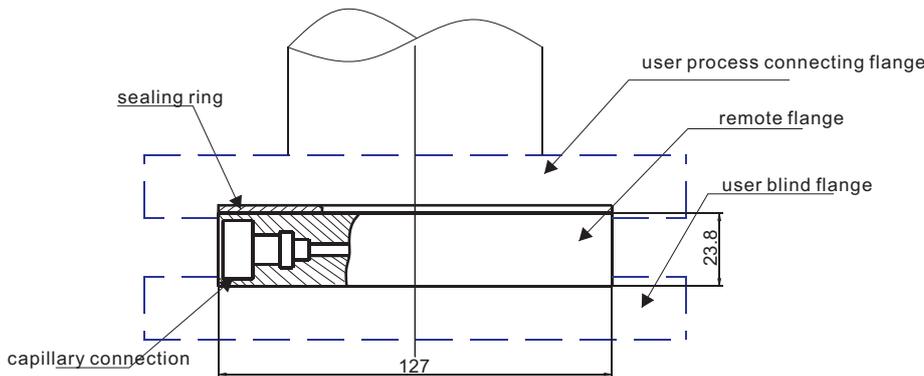

## Description

The pressure transmitter with remote device, includes one pressure transmitter, one or two remote diaphragm sealing device, and the filling liquid. The flange can be installed directly or connected through capillary. When working, the thin & flexible membrane and the filling liquid will separate the transducer's pressure sensitive element from the process medium, the diaphragm will be connected with the transmitter through the capillary or flange.

When applying process medium pressure, the diaphragm is deformed, and will transfer the measured pressure to transmitter membrane through the liquid filling system and capillary. The passed pressure will cause the sensing diaphragm on the transmitter's pressure sensitive element to deform, the deformation is proportional to the process pressure, and is converted to the appropriate current, voltage or digital HART output signal

Remote diaphragm seal device mainly includes: (1199) PFW flat remote device, (1199) RTW thread mounted remote device, (1199)EFW is inserted barrel type remote device, (1199) flange mounted remote transmission device and (1199 ) the SSW health type remote transmission device
